Mini Gardens

Description

A modular system that allows you to make living walls and other systems simply by connecting the container modules!

Ideas include a courtyard wall, vertical strawberries and herbs, the possibilities are endless!

When Vera first saw these in Singapore she was determined to bring them to New Zealand to offer the small or courtyard gardener the ability to grow more in a small space with style and Panache!

Ideal for:

- Kitchen 'herb' walls
- Courtyard Vertical Gardens
- Modular planters to fit a vast array of situations
- Commercial or trade display enhancements
- Florists or Garden Centres as 'Living Displays'
- Strawberries, lettuce, colourful annuals, herbs!

How these work

Each module connects to another either above, behind or beside.

Use modules back to back for a novel planter or vertically to create a dramatic living wall. Can be used either indoors or outside as part of a courtyard or 'outdoor garden room'

For commercial premises or trade events these planters are ideal creating a stylish and dramatic effect that can be constructed in next to no time! Add the plants and the range of possibilities is endless!

One kit consists of 3 rows of modules as shown, or 9 growing spaces. These can be configured as a 3x3 wall or use 2 sets to achieve the vertical 6 row drop as shown above right.

The modules originate from Portugal, and are carefully designed to provide an optimum growing environment for plants considering flow of irrigation and other important factors to plant health

How to Buy:

Price: \$139.99 including freight to any part of New Zealand.
