

Sedum 'Mr Goodbud'

Sedums are a valuable garden plant because of their ability to 'fill a space' flower for a long period from Spring to Autumn and being a succulent, store moisture for when things are a little drier over summer. 'Mr Goodbud' is a new introduction and a winner of an Award of Garden Merit for it's improved form and impressive flowering characteristics. Sedum 'Mr Goodbud' has tight compact foliage with strongly contrasting light flower buds evolving to deepest mauve mature flowers

Dimensions: Height to 45cm Width to 35cm
Plant: Full Sun

Sedum 'Hot Stuff'

This Sedum is a hot little number! Pretty as a picture in soft pink, it is small and compact in stature, a sedum with a 'trim little figure' at only 30cm tall! Forms a compact mound, it is a relative of Sedum 'Brilliant' ideal for edging or rockeries, mass planting in drier areas of the garden to give vibrant colour over an extended period

Dimensions: Height to 30cm Width to 35cm
Plant: Full Sun

Growing Situation and Care Notes

Sedums do require moderate water especially when establishing them, but as expected with a dry tolerant plant sedums do not like wet feet. Allow to dry out between waterings. Plant in a well drained situation with full sun to morning shade. Preferred pH is 5.8-7.2. Prefer only light soil fertility for best results. They do not like chemical sprays so you can 'go natural' with these plants!!

Where to Buy:

Contact your local garden centre.
